

Network Protocols (from provided image)

Slides for each protocol listed in the image.

Prepared automatically.

ARP — Address Resolution Protocol

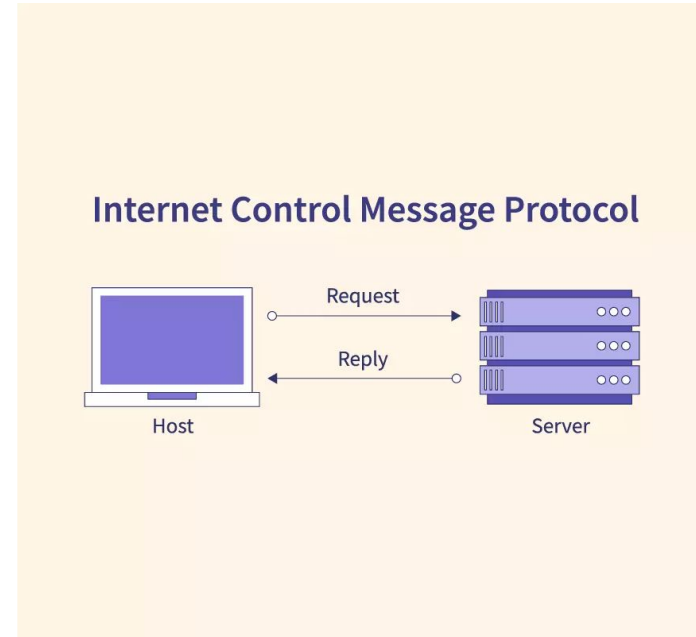

- Details / notes:
 - Protocol full name and abbreviation
 - Which OSI/Internet layer it belongs to
 - Main purpose and common use cases
 - How it works (brief)
 - Common ports (if applicable)
 - Security considerations / common issues

ICMP — Internet Control Message Protocol

- Details / notes:

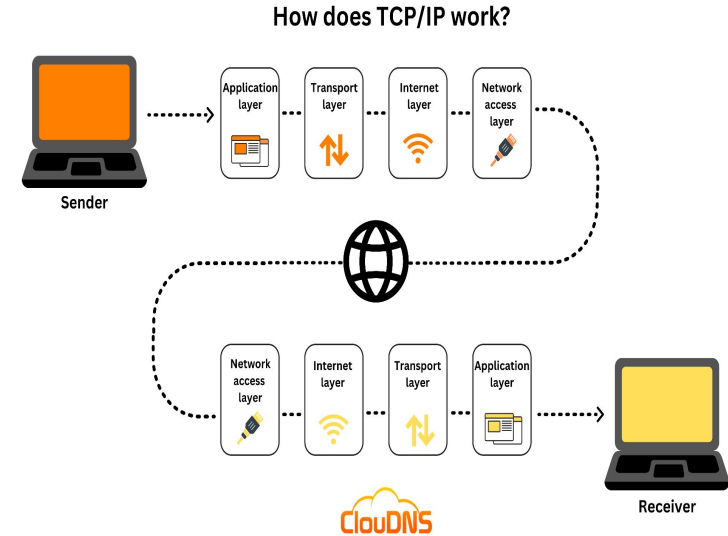

- Protocol full name and abbreviation
- Which OSI/Internet layer it belongs to
- Main purpose and common use cases
- How it works (brief)
- Common ports (if applicable)
- Security considerations / common issues

TCP — Transmission Control Protocol

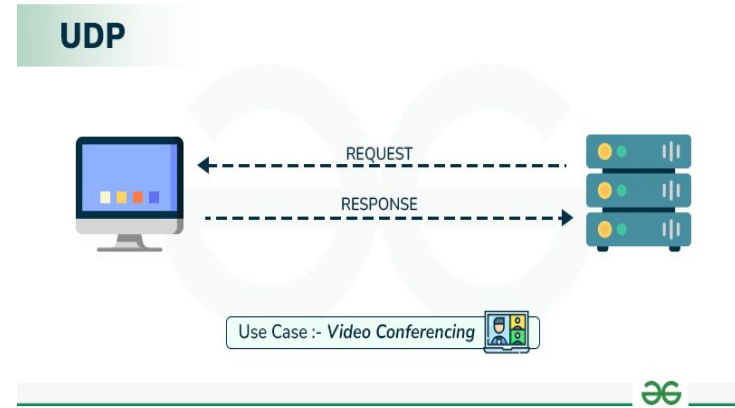

- Details / notes:

- Protocol full name and abbreviation
- Which OSI/Internet layer it belongs to
- Main purpose and common use cases
- How it works (brief)
- Common ports (if applicable)
- Security considerations / common issues

UDP — User Datagram Protocol

- Details / notes:
 - Protocol full name and abbreviation
 - Which OSI/Internet layer it belongs to
 - Main purpose and common use cases
 - How it works (brief)
 - Common ports (if applicable)
 - Security considerations / common issues

IP — Internet Protocol

- Details / notes:

- Protocol full name and abbreviation
- Which OSI/Internet layer it belongs to
- Main purpose and common use cases
- How it works (brief)
- Common ports (if applicable)
- Security considerations / common issues

FTP — File Transfer Protocol

- Details / notes:

- Protocol full name and abbreviation
- Which OSI/Internet layer it belongs to
- Main purpose and common use cases
- How it works (brief)
- Common ports (if applicable)
- Security considerations / common issues

HTTP/HTTPS — Hypertext Transfer Protocol / Secure

- Details / notes:
 - Protocol full name and abbreviation
 - Which OSI/Internet layer it belongs to
 - Main purpose and common use cases
 - How it works (brief)
 - Common ports (if applicable)
 - Security considerations / common issues

SMTP — Simple Mail Transfer Protocol

- Details / notes:

- Protocol full name and abbreviation
- Which OSI/Internet layer it belongs to
- Main purpose and common use cases
- How it works (brief)
- Common ports (if applicable)
- Security considerations / common issues

DNS — Domain Name System

- Details / notes:

- Protocol full name and abbreviation
- Which OSI/Internet layer it belongs to
- Main purpose and common use cases
- How it works (brief)
- Common ports (if applicable)
- Security considerations / common issues

Telnet / SSH — Telnet / Secure Shell

- Details / notes:

- Protocol full name and abbreviation
- Which OSI/Internet layer it belongs to
- Main purpose and common use cases
- How it works (brief)
- Common ports (if applicable)
- Security considerations / common issues

Well done, you escaped the
dungeon!

Completed In 45.90 seconds
